Houston, TX

Dear Hiring Manager,

I am writing to express my interest in the IT Intern - Semester 1 - Generation H position at Hermès. As a Computer Science student at the Colorado School of Mines with a focus on Cyber Defense, I am eager to apply my academic knowledge and hands-on experience in software development and cybersecurity to contribute to your team.

During my recent internship at Netisys, I developed a server monitoring tool in Java to improve system performance and real-time notifications. This experience, along with my web development internship at MDC, gave me a solid foundation in coding, debugging, and collaborating within development teams to produce high-quality work. I've developed strong technical skills in areas such as network security protocols, vulnerability scanning tools like Nmap and Nessus, and working with networking software such as Wireshark, which I believe will align well with the responsibilities of the IT Intern role at Hermès.

In addition to my technical expertise, I bring an international perspective as a native of Paris who is fluent in French. This background, coupled with my communication skills and involvement in leadership roles at school, enables me to effectively collaborate in diverse and multicultural environments. As a member of the National Organization for Business and Engineering (NOBE), I have honed my organizational and team coordination skills, further strengthening my ability to thrive in a dynamic environment such as Hermès.

Thank you for considering my application. I look forward to the possibility of contributing to Hermès' continued success. Please feel free to contact me at (832)-869-6242 or by email at kallais@mines.edu to schedule an interview.

Sincerely,

Kasper Allais
